

Linear inequalities

A LEVEL LINKS

Scheme of work: 1d. Inequalities – linear and quadratic (including graphical solutions)

Key points

- Solving linear inequalities uses similar methods to those for solving linear equations.
- When you multiply or divide an inequality by a negative number you need to reverse the inequality sign, e.g. < becomes >.

Examples

Example 1 Solve $-8 \le 4x < 16$

$-8 \le 4x < 16$	Divide all three terms by 4.
$-2 \le x < 4$	

Example 2 Solve $4 \le 5x < 10$

$4 \le 5x < 10$	Divide all three terms by 5.
$\frac{4}{5} \le x < 2$	

Example 3 Solve 2x - 5 < 7

2x - 5 < 7 $2x < 12$	 Add 5 to both sides. Divide both sides by 2.
<i>x</i> < 6	

Example 4 Solve $2 - 5x \ge -8$

when dividing by a negative number.		
-------------------------------------	--	--

Example 5 Solve 4(x-2) > 3(9-x)

4(x-2) > 3(9-x) $4x-8 > 27-3x$ $7x-8 > 27$ $7x > 35$ $x > 5$	 Expand the brackets. Add 3x to both sides. Add 8 to both sides. Divide both sides by 7.

$$\mathbf{f} \qquad -4x \ge 24$$

4 Solve these inequalities.

a
$$3t + 1 < t + 6$$

b
$$2(3n-1) \ge n+5$$

5 Solve.

a
$$3(2-x) > 2(4-x) + 4$$
 b $5(4-x) > 3(5-x) + 2$

b
$$5(4-x) > 3(5-x) + 2$$

Extend

Find the set of values of x for which 2x + 1 > 11 and 4x - 2 > 16 - 2x.
